*All-in-One Solution for Facial Wrinkles & Rhytids*

# THE FIRST AND ONLY NON-INVASIVE HANDS-FREE FACIAL REMODELING DEVICE FOR THE TREATMENT OF WRINKLES

According to the Merriam-Webster Dictionary, the definition of remodeling is to alter the structure; to cause living tissue to undergo structural reorganization, alteration, or renewal<sup>1</sup>. As reported by The American Society of Plastic Surgeons, in 2018 of the 15.9 million non-surgical aesthetic procedures performed, over 12.2 million<sup>2</sup> were facial remodeling treatments. Facial remodeling continues to be the #1 aesthetic procedure patients are seeking in their quest to achieve a youthful appearance without anesthesia, surgical scars, or downtime.

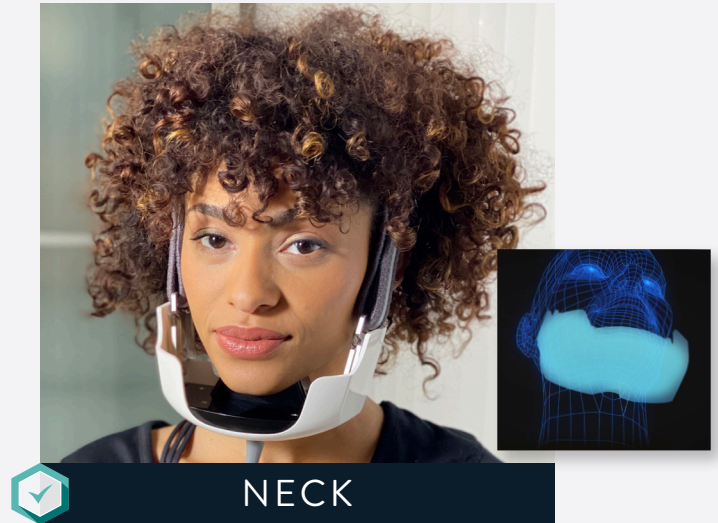

Evoke's proprietary non-invasive technology is an industry first, delivering a structural re-organization of the facial and submental tissues. Treating facial wrinkles and rhytids produces results that are associated with a youthful appearance. The ultimate in medical grade technology that ensures your practice capitalizes on client demand for facial remodeling treatments.

# EVOKE *face* + EVOKE *neck*

## HANDS-FREE FACIAL REMODELING

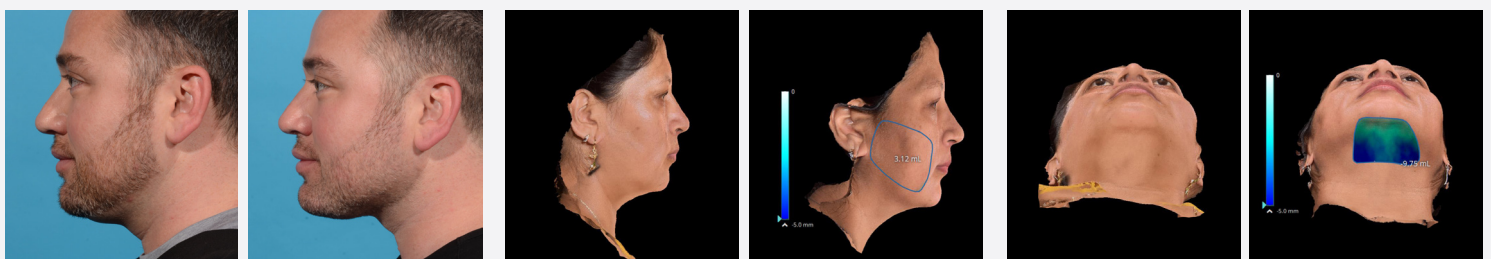

Evoke's hands-free facial applicators deliver proven bipolar radiofrequency (RF) energy to the cheeks, neck, and jawline. The RF energy penetrates deep into the subdermal layer, heating the Fibroseptal Network (FSN). With its ability to maintain a constant temperature, Evoke targets wrinkles and fine lines to remodel tissue and deliver more defined facial characteristics.

Patients can surf the internet, read a book, or watch TV, while treatments to restore youth and turn back the hands of time are being performed.

Evoke's non-invasive, hands-free design and programmable technology make it an ideal social distancing treatment due to a reduction in the required patient-physician face-to-face contact during the procedure.

## BEFORE & AFTER

# ENHANCED SAFETY PROFILE THROUGH INTELLIGENT PROGRAMMABLE TECHNOLOGY

- » Built-in visual indicators illuminate as each applicator reaches the optimal temperature, providing updates on treatment progress. Each applicator is programmed to detect temperature fluctuations and to adjust accordingly, to ensure the delivery of uniform consistent bulk heating.
- » Evoke's LCD treatment screen enables physicians to visually monitor the thermal effect of each applicator at any point during the procedure.
- » Evoke's proprietary RF technology ensures it can safely and effectively be used on all skin types.
- » Evoke is designed with a patient call button to allow clients to easily pause their treatment and have clinic staff make adjustments if required.
